

**PRESS RELEASE**

## **LiquidStream Interoperates with Camiant**

**The LxS-3216 Universal Edge QAM and Camiant's Universal Edge Resource Manager Allows Industry to Share QAM Resources across Services**

**Philadelphia, PA - June 25, 2008** – LiquidStream Systems, Inc. and Camiant, Inc., today announced that they have completed interoperability testing between LiquidStream's LxS-3216 Universal Edge QAM and Camiant's Universal Edge Resource Manager\* (UERM).

“LiquidStream has delivered an exceptionally high density and flexible QAM,” said Randy Fuller, vice president, business development of Camiant, Inc. “Camiant's award-winning UERM empowers cable operators to leverage policy-based intelligence to best control and maximize bandwidth efficiency across multiple services including Video On Demand (VOD) and Switched Digital Video (SDV), through the sharing of quadrature amplitude modulation (QAM) resources. Together, LiquidStream and Camiant make it possible for operators to recover highly-valued bandwidth and deliver dynamic QAM sharing across services for exceptional efficiency.”

The growth in VOD, SDV and CMTS usage is driving the need for Universal Edge QAM sharing to maximize asset utilization. The LxS-3216 with its 512 QAMs per chassis with 32 QAM channels per RF port is perfectly designed to help operators take advantage of QAM sharing between these growing services. The LxS-3216 protects these channels with carrier-class redundancy in a platform that requires no service interruption to add QAMs. Finally, no contiguous channel blocks need to be reserved as the 32 QAMs on each RF port can be placed anywhere in the digital band.

“The LxS-3216 is designed specifically for the purpose of sharing EdgeQAM resources between multiple services,” says Tony Pierson, vice president, business development for LiquidStream. “Camiant's world class UERM allows cable operators to fully maximize the value of our QAMs.”

Both products will be on display in their respective booths at SCTE Cable-Tec Expo in Philadelphia, PA.

**Product Demos:** Wednesday, June 25 through Friday, June 27: Live demonstration of the LxS-3216 with LiquidStream personnel at the LiquidStream booth # 2529. Experience the flexibility, reliability, power and performance of LiquidStream's LxS-3216 Edge QAM.

Please visit Camiant in booth #2035. Camiant will be showcasing its Universal Edge Resource Manager (UERM) which has just been awarded a 3.5 Diamond Rating by a select group of independent judges participating in Broadband Gear Report's (BGR) 2008 Diamond Technology Reviews.

**About Camiant**

Camiant's policy control solution empowers broadband service providers to open their networks and deliver a significantly higher quality of service to subscribers by guaranteeing superior performance of rich, high-bandwidth services such as video, streaming media, online games and commercial services. Leveraging its deep expertise in policy management and application assurance, Camiant seamlessly enables broadband service providers to deliver high performing user experiences as new, innovative multimedia services continue to enter the market with increasing unpredictability.

Camiant's market-leading policy control software platform is the solution of choice for service providers who want to reduce OPEX and CAPEX, increase ARPU and reduce churn by improving the user experience. By delivering predictable performance of new multimedia applications, Camiant has become the trusted source for delivering policy control and application assurance to service providers globally. **About LiquidxStream Systems Inc.**

LiquidxStream develops and manufactures edge access systems that enhance the rollout and profitability of new real-time digital services for broadband cable service providers. Our products reflect our corporate mission to provide efficient, cost-effective and innovative solutions that will improve network density, flexibility and reliability for our customers. "LiquidxStream. Keeping the Revenue Flowing." For more information, please visit [www.LiquidxStream.com](http://www.LiquidxStream.com)
